

Test Report

SauceDemo – Cart & Checkout Feature

Application Under Test: <https://www.saucedemo.com/> | Tester: QA Portfolio Project | Date: September 6, 2026

1. Objective

This report documents manual functional testing of the Cart and Checkout flow on SauceDemo, covering adding/removing items, cart persistence, checkout form validation, price calculation, and checkout cancellation.

2. Test Environment

Application URL: <https://www.saucedemo.com/>

Browser: Google Chrome (latest)

Account used: standard_user

Test Type: Manual functional testing (positive, negative, and calculation verification)

3. Test Case Summary

ID	Test Case	Expected Result	Actual Result	Status
TC11	Add single item to cart	Cart icon shows 1, button becomes Remove	Cart icon showed 1, button changed to Remove	Passed
TC12	Add multiple items	Cart icon shows 3	Cart icon showed "3"	Passed
TC13	Remove item from cart page	Item removed, count updates to 0	Item disappeared, count updated to 0	Passed
TC14	Remove item from products page	Item removed, count updates	Item removed, count updated correctly	Passed
TC15	Cart persists after navigation	Cart items remain after viewing a product detail page	Cart still showed the same items	Passed
TC16	Empty cart checkout	Behavior with 0 items observed	System allowed checkout to proceed and asked for user info despite empty cart	Finding
TC17	Missing first name at checkout	Error: first name required	Error shown: "First Name is required"	Passed
TC18	Missing last name at checkout	Error: last name required	Error shown: "Last Name is required"	Passed
TC19	Missing postal code at checkout	Error: postal code required	Error shown: "Postal Code is required"	Passed
TC20	Complete full checkout	Order confirmation page appears	"Thank you for your order" message appeared	Passed
TC21	Price calculation check	Item total + tax = Total (8% fixed rate)	Verified: \$25.98 + \$2.08 tax (8%) = \$28.06 - math is correct	Passed
TC22	Cancel checkout	Returns to Products/Cart without completing order	User returned to products page, order not completed	Passed

4. Overall Results

Metric	Result
Total Test Cases Executed	12
Passed	11
Findings / Defects	1
Failed (incorrect app behavior)	0
Pass Rate	92% (11/12)

11 of 12 test cases behaved as expected. One finding (TC16) was logged regarding checkout being accessible with an empty cart. TC21 (price calculation) was initially suspected as a defect but was verified to be correct after recalculating the 8% tax rate against the item total — see verification note in Section 5.

5. Findings

FIND-01: Checkout accessible with an empty cart

ID	FIND-01
Severity	Low (usability/business logic concern, not a functional crash)
Related Test Case	TC16
Steps to Reproduce	1. Log in with standard_user 2. Without adding any items, open the Cart page 3. Click 'Checkout'
Expected Result	Checkout should arguably be blocked, or a message should indicate the cart is empty
Actual Result	The checkout process proceeds normally and asks for shipping/billing info even with 0 items in the cart
Recommendation	Disable the Checkout button when the cart is empty, or redirect the user back with a clear message

Verification Note — TC21 (Price Calculation)

Initial review suspected a tax calculation defect. Recalculating manually: SauceDemo applies a fixed 8% tax rate. For an item total of \$25.98, 8% tax = \$2.0784, which rounds to \$2.08 as displayed. Item total (\$25.98) + tax (\$2.08) = \$28.06, matching the displayed total exactly. No defect confirmed - the application's math is internally consistent.

Payment Information:

SauceCard #31337

Shipping Information:

Free Pony Express Delivery!

Price Total

Item total: \$25.98

Tax: \$2.08

Total: \$28.06

Figure 1 — Price total breakdown used to verify the 8% tax calculation (TC21)

6. Conclusion

The Cart and Checkout flow on SauceDemo is functionally solid: item management, form validation, price calculation, and checkout cancellation all behave correctly. One low-severity usability finding was identified around empty-cart checkout access. This testing cycle also demonstrates the importance of verifying suspected defects with real calculations before reporting them, to avoid false positives.
