

Test Report

SauceDemo – Login Feature

Application Under Test: <https://www.saucedemo.com/> | Tester: QA Portfolio Project | Date: September 6, 2026

1. Objective

This report documents the manual functional testing performed on the Login feature of the SauceDemo e-commerce demo application. The objective was to verify correct handling of valid credentials, invalid credentials, empty fields, security edge cases, and session behavior.

2. Test Environment

Application URL: <https://www.saucedemo.com/>

Browser: Google Chrome (latest)

Test Type: Manual functional testing (positive, negative, and security-oriented test cases)

Accounts used: standard_user, locked_out_user, problem_user

3. Test Case Summary

ID	Test Case	Expected Result	Actual Result	Status
TC01	Valid login	Redirect to products page	Redirected to products page as expected	Passed
TC02	Locked out user	Error message: account locked out	Error shown: "Sorry, this user has been locked out."	Passed
TC03	Wrong password	Error about username/password mismatch	Error shown: "Username and password do not match any user in this service"	Passed
TC04	Empty username	Error: username required	Error shown: "Username is required"	Passed
TC05	Empty password	Error: password required	Error shown: "Password is required"	Passed
TC06	Empty both fields	Error: username required	Error shown: "Username is required"	Passed
TC07	SQL injection attempt	Login fails gracefully, no bypass	Login rejected, error: "Username and password do not match any user in this service"	Passed
TC08	Case sensitivity	Note actual behavior	Login failed - username is treated as case-sensitive	Passed
TC09	problem_user login	Login succeeds; check for known visual bugs	Login succeeded, but product images are incorrect (see Defect DEF-01)	Passed / Bug Found
TC10	Session persistence	User stays logged in after refresh	User remained logged in after page refresh	Passed

4. Overall Results

Metric	Result
Total Test Cases Executed	10
Passed	10
Failed	0
Defects Found	1
Pass Rate	100%

All 10 test cases produced the expected behavior described in the test design. One defect was identified during TC09 and is documented in Section 5.

5. Defect Report

DEF-01: Incorrect product images shown for problem_user account

Defect ID	DEF-01
Severity	Medium (Visual / UI defect, does not block core functionality)
Related Test Case	TC09
Preconditions	User is on the SauceDemo login page
Steps to Reproduce	1. Go to saucedemo.com 2. Log in with username 'problem_user' and password 'secret_sauce' 3. Observe the Products page
Expected Result	Each product should display its correct product image (backpack, bike light, t-shirt, etc.)
Actual Result	All product images are replaced with an unrelated image of a dog, regardless of the actual product
Environment	Chrome (latest), Windows, https://www.saucedemo.com/inventory.html

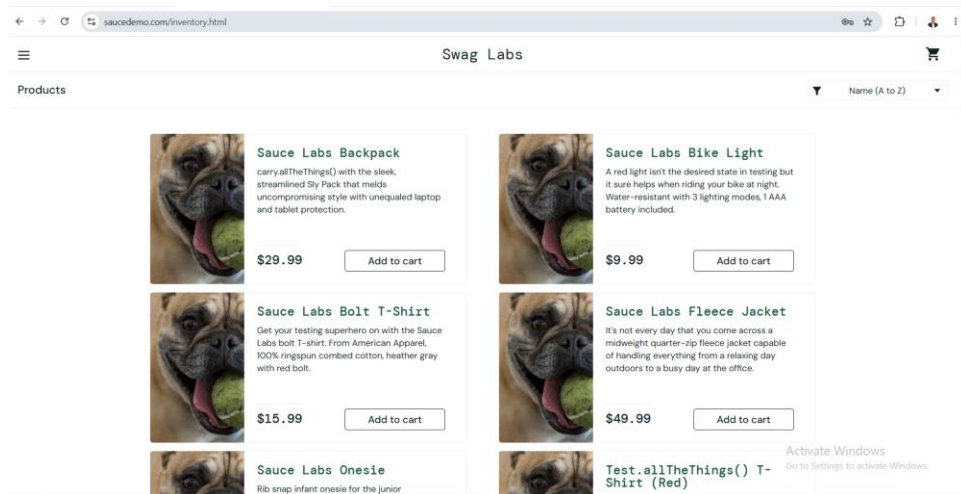

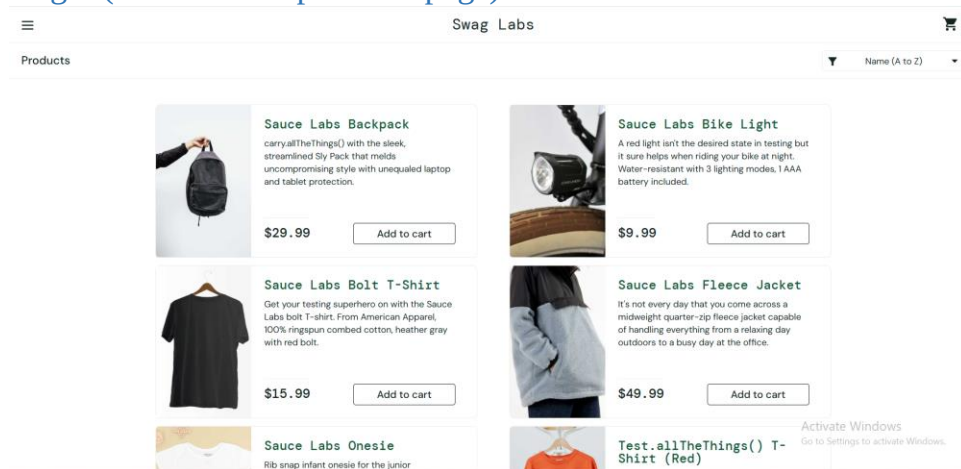

Figure 1 — Products page for problem_user showing incorrect (dog) images instead of product photos

6. Conclusion

The login functionality of SauceDemo is robust for standard, negative, empty-field, and basic security test scenarios. Session persistence after refresh works correctly. One UI-level defect (DEF-01) was identified affecting the problem_user account's product listing page, confirming the importance of testing beyond the 'happy path' and validating each test account individually.

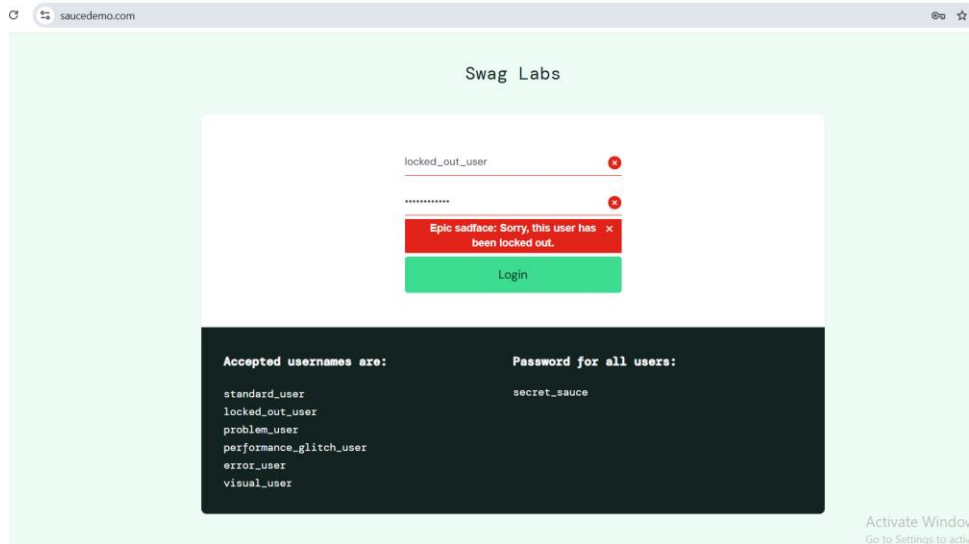

Appendix — Evidence Screenshots

TC01 — Valid login (redirected to products page)

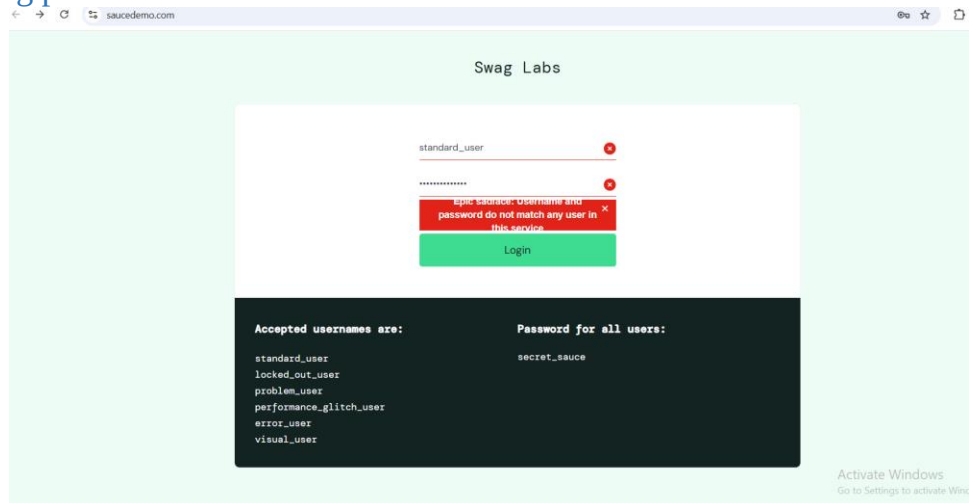

TC01 evidence

TC02 — Locked out user

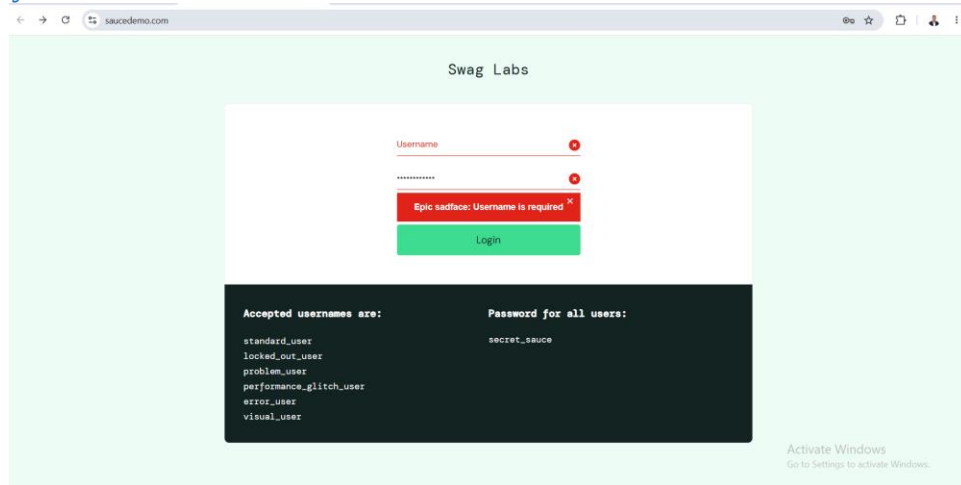

TC02 evidence

TC03 — Wrong password

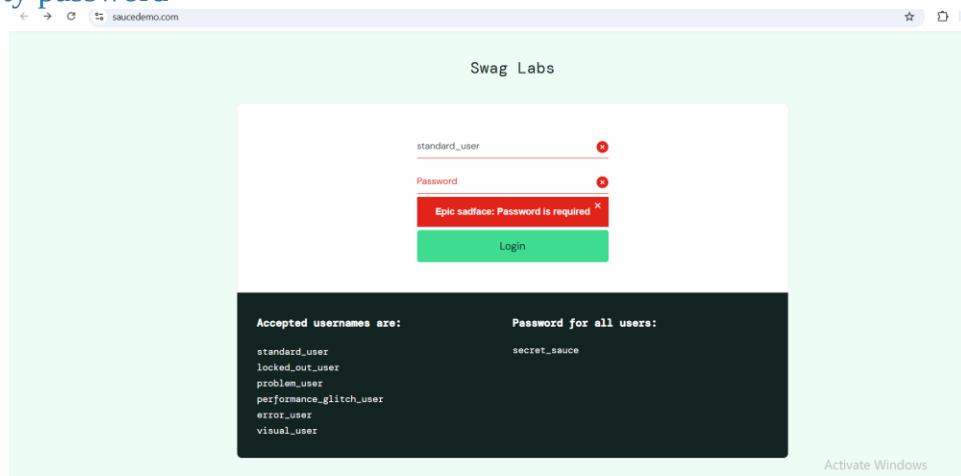

TC03 evidence

TC04 — Empty username

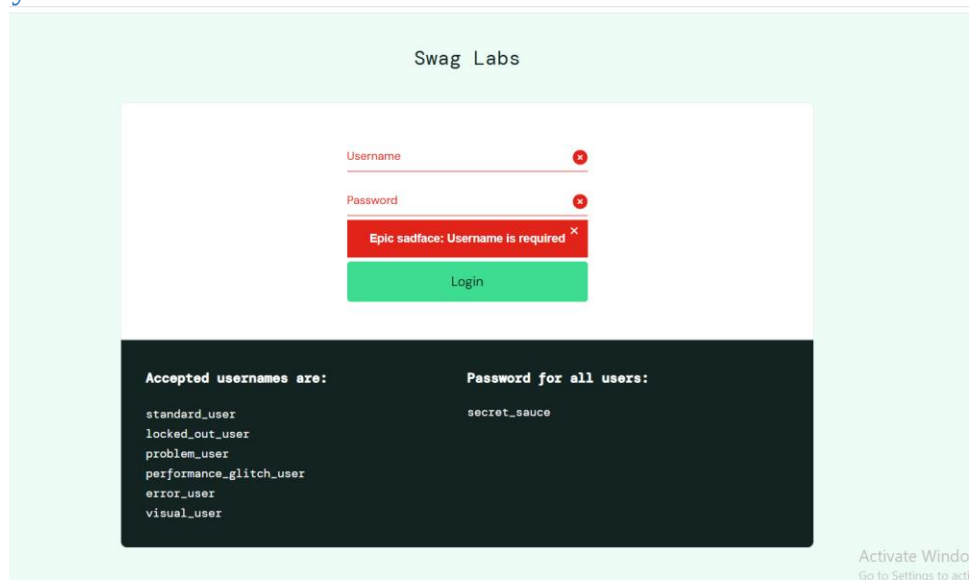

TC04 evidence

TC05 — Empty password

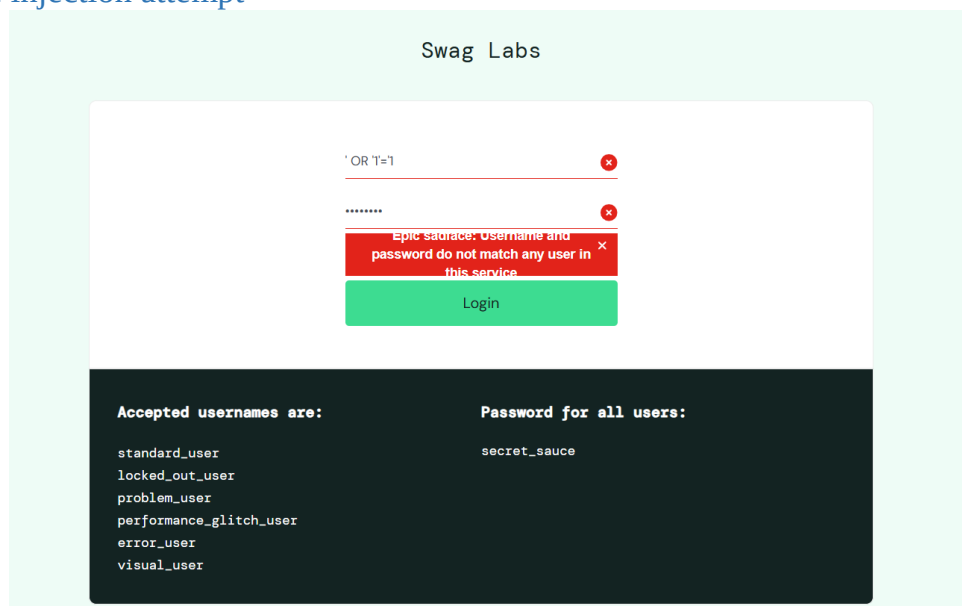

TC05 evidence

TC06 — Empty both fields

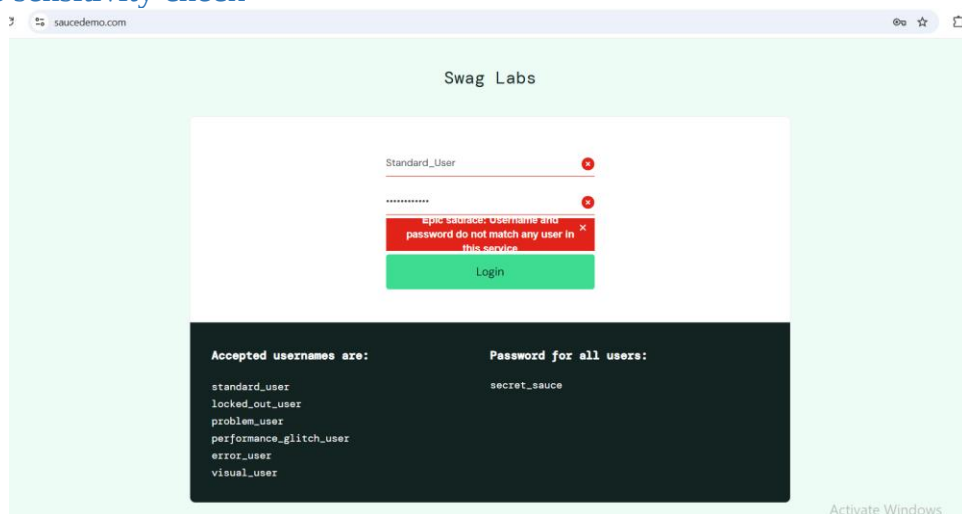

TC06 evidence

TC07 — SQL injection attempt

TC07 evidence

TC08 — Case sensitivity check

TC08 evidence
